Turn data into innovation

Companies across the Öresund region generate increasing amounts of data every day. Yet turning that data into actionable insights often requires specialised expertise that is difficult to access internally.

DataCatalyst Öresund supports companies to:

Analyse
data using advanced methods, AI and quantitative approaches

Visualize
data to get understandable insights

Accelerate
innovation by supporting the development of products, services or processes

DataCatalyst Öresund provides cross-border expert support from InfraVis (Lund University) and QIM (DTU):

Spectroscopy & chemical data analysis • AI & machine learning • Image analysis & tomography • Visualization & interactive exploration
